Installing JAVA JRE Version 1.8.0_51

Open Oracle Financials using Internet Explorer and attempt to launch Oracle Forms

Install Pop Up will appear for JAVA JRE version 1.8.0_51
By clicking on the install another JAVA Pop up will appear

Click Install
The Installer process will begin
The Out of Date Java version will appear

Click Remind Me Later

If you do Click Uninstall, any out of data Java versions will be removed as well as the current install process of 1.8.0_51. Once the Uninstall process completes, you will need to start over again installing 1.8.0_51 and when you get to this point you would click Remind Me Later. Whichever route you take will work. If you leave the older versions, applications requiring JAVA should acknowledge the latest version it needs to function. Eventually, you would want to clean up older versions and keep the most up to date one for Security reasons.
Once you click Remind Me Later the install will complete.

You have successfully installed Java.

You will be prompted when Java updates are available. Always install updates to get the latest performance and security improvements. More about update settings

When you click close, your browser will be opened so you can verify that Java is working.

Close
The Verify Java Version window will pop up

Click Activate Java so you can see what Java versions are detected on your desktop
Click Allow Now and the detector will run

If you get a Pop up during this time or at any other times stating your Java is out of date, continue to select Later as you do not want to install anything higher than 1.8.0_51
In order to run the Java Detection, select Run
Do you want to run this application?

Name: Java Detection
Publisher: Oracle America, Inc.
Location: http://java.com

This application will run with unrestricted access which may put your computer and personal information at risk. Run this application only if you trust the location and publisher above.

- Do not show this again for apps from the publisher and location above

More Information

Depending on your system settings, you may need to respond to prompts to allow the verification to continue.

If you have installed Java and there is an error with the verification, there could be a configuration issue (e.g., browser, Java control panel, security settings) or the Java plug-in is blocked by the browser.

- See the troubleshooting FAQ

If you recently completed your Java software installation, restart your browser (close all browser windows and re-open) to enable the newly installed Java version in the browser. Javascript must also be enabled.
Finally you will be able to validate a successful installation of the 1.8._51 version. Again you do not want to move forward at this time w/ the later version 1.8.0_65

You can also validate your Java JRE version by opening up your Control Panel and Clicking on JAVA computer settings
Click About on the General Tab

About
View version information about Java Control Panel.

Network Settings
Network settings are used when making Internet connections. By default, Java will use the network settings in your web browser. Only advanced users should modify these settings.

Temporary Internet Files
Files you use in Java applications are stored in a special folder for quick execution later. Only advanced users should delete files or modify these settings.

Java in the browser is enabled.
See the Security tab
About Java

Version 8 Update 51  (build 1.8.0_51-b16)
